

MA Energy Commissioner Visits Holyoke Company

Holyoke MA, January 24, 2010 -Aegis Energy Services, Inc., the leading manufacturer and installer of small, modular Combined Heat and Power systems in the Northeast, today welcomed Phillip Guidice, Commissioner of Massachusetts Department of Energy Resources (DOER) to their Corporate Headquarters.

Accompanying Mr. Guidice, were Mr. Christian Scorzoni, Senior Advisor and Counsel, and Mr. Gerry Bingham, Senior Coordinator Policy and Business Programs.

The DOER officials were interested in meeting with Aegis Energy Services, Inc. after learning of the company's involvement with the New Bedford Housing Authority, to help the agency improve energy efficiency, reduce its carbon footprint, and develop alternative energy.

The Massachusetts officials toured the 25-year-old Holyoke manufacturing and engineering company, which has been expanding and adding jobs over the past year as Combined Heat and Power (CHP) technology continues to garner attention for its contribution to energy efficiency and carbon emission reduction. CHP, also referred to as cogeneration, is the simultaneous production of useable heat and electricity from a single fuel source, in this case natural gas.

Messrs. Guidice, Scorzoni, and Bingham, explored the many success stories and opportunities for this technology throughout the state with Lee Vardakas, General Manager. "We are pleased that DOER is actively seeking solutions for the state's energy challenges and recognizes the enormous benefits offered by small, modular CHP systems, such as those we manufacture and install," stated Mr. Vardakas.

About Aegis Energy Services, Inc.

Aegis Energy Services, Inc. is a fully integrated organization providing a comprehensive approach to modular cogeneration systems ranging from economic analysis, engineering, manufacturing, installation, operation, and maintenance to system ownership for shared savings programs. They have installed hundreds of CHP systems throughout the Northeast in facilities such as healthcare, universities, YMCAs and multifamily residential buildings, and have also assisted many customers in applying for and receiving grants and incentives for CHP energy projects. They can be reached at (413) 536-1156 or visit their website www.aegisenergyservices.com
